IOA GOVERNANCE PLATFORM · CURRENT BUILD

UI Inventory

Every top-level navigation destination, its tabs, and what's actually on screen — pulled from the live sidebar (`Layout.jsx`), the route table (`App.jsx`), and a logged-in screenshot pass against the running SPA. Six groups plus Administration's own 8-tab sub-nav.

Platform

no pillar — sits above the five groups

`/` **Dashboard**

Automation Trust Index + Enforcement Activity hero cards, 4 stat tiles (Policies/Active/Incidents/Models), Open Incidents + Recent Policies lists

Governance

policy definitions, violations, enforcement, MCP registry

`/governance` **Policies**

Policy table (Name/Status/Version/Violations/Created); detail modal holds Rules + Bindings editors and the Observe/Warn/Enforce mode toggle

`/violations` **Violations**

Status + Severity filters; table expands in-place to a waiver panel and status history timeline per row

`/enforcement` **Enforcement**

4-card decision-outcome strip, By-Policy breakdown table, raw enforcement-events table with correlation IDs

`/mcp-registry` **MCP Registry** `Registry` `Discovered`

Registry tab: server table + detail modal (tools, credential exposure, assurance evidence, unified history)

`/mcp-registry` **MCP Registry** `Registry` `Discovered`

Discovered tab: scan queue from the discovery-agent CLI, Promote / Dismiss actions, diff-since-last-scan

Risk

n8n workflow risk scoring

`/workflows` **Workflows** `Summary` `Workflows` `Node Types` `By Domain`

Summary tab: stat cards, risk distribution bar, PII-exposure and hardcoded-secrets tables, top-risk-workflows list

Assurance

recoverability evidence, data lineage, anomaly detection

`/assurance` **Assurance**

Auto-collected platform health tiles (API Gateway / DB / n8n / Containers) + per-workflow evidence table

`/lineage` **Data Lineage**

Summary strip (chains/violations/external/cross-border), chain table expanding to an SVG data-flow DAG

`/anomaly` **Anomaly Detection** `Alerts` `Baselines` `Attack Paths`

Alerts tab: 5-card severity strip, expandable alert rows with deviation score and correlation ID

Runtime Intelligence

telemetry, inference, audit, escalation

`/telemetry` **Telemetry** `Summary` `Chart` `AI cost & tokens` `Raw`

Summary tab: per-service/metric cards (avg/min/max, sample count)

`/inference` **AI Inference** `Models` `Requests` `Decisions`

Models tab: registry table (Name/Version/Status/Endpoint/Sanctioned) — this is what EP-201-F5 now enforces against

`/audit` **Audit Log**

4-column filter grid (Actor/Resource/Event/Outcome), append-only events table, raw event-detail modal

`/escalation` **Escalation** `Incidents` `Rules`

Incidents tab: table + detail modal with containment actions (Suspend/Quarantine/Restore/Rollback) and notification log

Business Value

ROI modeling

`/roi` **ROI Intelligence**

Live/Manual data toggle, 6 assumption sliders, value/ROI/payback stat cards, pillar-by-pillar before/after breakdown

Administration

8-tab horizontal sub-nav under one section

`/admin/tags` **Tags**

Tag registry table with inline add/edit rows

`/admin/waivers` **Waivers**

Waiver table with expiry-urgency labels and Approve/Deny actions

`/admin/approval-chains` **Approval Chains**

Chain-template table + pending-approvals table with an inline decision panel

`/admin/integrations` **Integrations**

Platform-picker (n8n/Make/Zapier/Power Automate) + connection cards with test/expand actions

`/admin/users` **Users**

User table with inline Role Editor and Password Reset Editor rows

`/admin/control-tests` **Control Tests**

3-card pass/fail/pending strip, test table expanding to per-run history

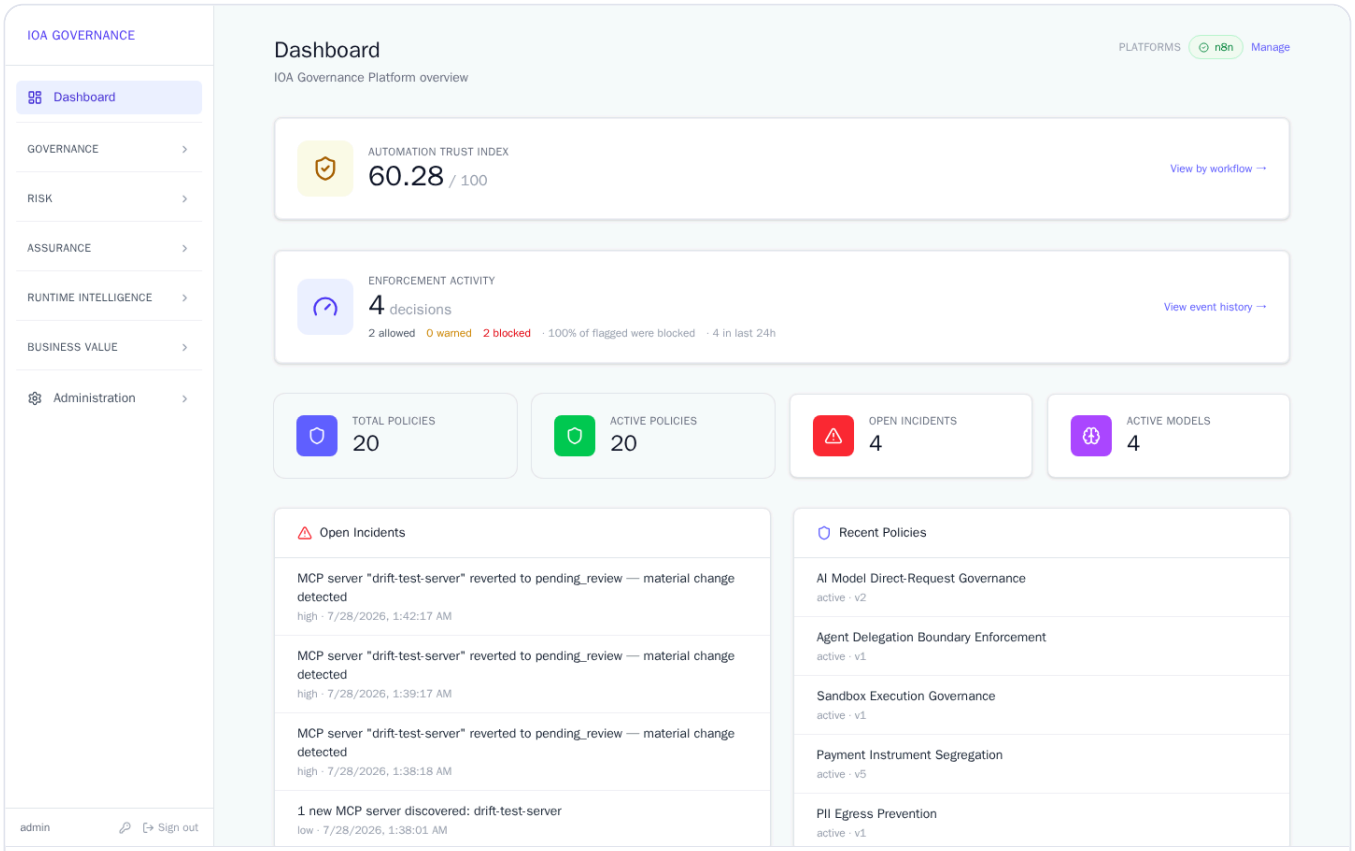

`/admin/prompt-registry` **Prompt Registry**

Prompt table expanding to content, approved models, permitted data classes, and version history

`/admin/api-docs` **API Docs**
